

## Developer console: Code tab

The file directory is the list of folders for your skill. In any skill, you can access the directory on the **Code** tab. The folders appear in a file tree on the left side of the screen, as shown in the preceding image. Your free AWS resources (generated automatically) are housed inside the main **Skill Code** folder.

These resources are listed in the following table.

File name	Description
index.js	Launches your skill, routes requests, and handles responses.
local-debugger.js	Contains a debugging script. However, this script is being deprecated (phased out). Instead, for debugging, use the <a href="#">ASK Toolkit for VS Code</a> .
package.json	Lists dependencies, licenses, and other basic information.
util.js	Lets you access media in your AWS storage bucket.
